F o r n o t i c e : Many substances are ubiquitous. A list of substances would require a declaration of all entries because all substances could be present at a concentration which is below the analytical detection limit. Therefore, lists of substances must also include a limit of declaration greater than zero. We assume for all substances of the list a limit of declaration of 0.1 %, which is also the concentration used in the European (Regulation (EC) No. 1907/2006 / *REACH REGULATION*), for substances of very high concern.

The observance of all these substances is not part of BASF ongoing production control. In view of the many factors that may effect processing and application of our products, these data do not relieve processor from carrying out own investigations and tests neither do these data imply any guarantee for certain properties nor the suitability of the product for a specific purpose. It is the responsibility of the recipient of our products to ensure that any proprietary rights and existing laws and legislation are observed.
